

What is the Energy Act 2023?

The Energy Act 2023 has received Royal Assent and will transform the UK's energy system by strengthening energy security, supporting the delivery of net zero and ensuring household bills are affordable in the long-term. The Act will deliver a more efficient energy system in the long-term, helping to keep energy costs low.

How big will energy storage be in the EU in 2026?

Looking forward, the International Energy Agency (IEA) expects global installed storage capacity to expand by 56% in the next 5 years to reach over 270 GW by 2026. Different studies have analysed the likely future paths for the deployment of energy storage in the EU.

Will the government invest in long duration electricity storage by 2024?

The government will put in place an appropriate policy framework by 2024 to enable investment in large scale long duration electricity storage (LDES), with the goal of deploying sufficient storage capacity to balance the overall system.

What is the 2022 to 2024 energy security plan?

This was published under the 2022 to 2024 Sunak Conservative government. This plan sets out the steps the government is taking to ensure the UK is more energy independent, secure and resilient. Putin's illegal invasion of Ukraine 12 months ago has put the need for energy security in stark perspective.

What will the government do in 2023?

The government will announce further recipients of funding in 2023. The government will work with Ofgem and Innovate UK to roll out digitalisation within the energy sector, building on our response to the recommendations of the Energy Digitalisation Taskforce.

Will 2023 be a smart and secure electricity system?

Government launched a consultation in July 2022 and its response in 2023 will confirm the outline of a new policy framework that will enable the transition to a smart and secure electricity system.
