Use the multimeter AC voltage gear to measure the voltage at both ends of the capacitor U, use the multimeter AC current gear to measure the current through the capacitor I. According to the formula $I = U/XC$ and $XC = 1 / (2\pi fC)$, where f is the frequency of the alternating current, the capacitor's capacitance can be calculated $C = 3.18 \times (I / U)$ (microfarads).

As capacitor switching is associated with high inrush current, the contactors are provided with damping resistors which limit the value of inrush current to a safe value. ... MO C Capacitor Duty Contactor 50kVAR 3P 440V AC In Built 1NO ...
