

# **Analysis of energy storage company positioning strategies**

Can energy storage be a strategic investment under competition?

These market dynamics serve as a motivation for this study to understand strategic investments in energy storage under competition, taking into account storage impact on the market price. Our work uses energy arbitrage as a test case with the intent to explore additional services in the future.

What are the factors affecting energy storage technology investment?

In addition, there are also many uncertain factors in technological innovation and market related to energy storage technology investment. On the one hand, Technological innovations appear at random points in time and investors are unable to make decisions between adopting existing and new technologies.

How to choose the best energy storage investment scheme?

By solving for the investment threshold and investment opportunity value under various uncertainties and different strategies, the optimal investment scheme can be obtained. Finally, to verify the validity of the model, it is applied to investment decisions for energy storage participation in China's peaking auxiliary service market.

How to promote energy storage technology investment?

Therefore, increasing the technology innovation level, as indicated by unit benefit coefficient, can promote energy storage technology investment. On the other hand, reducing the unit investment cost can mainly increase the investment opportunity value.

Is energy storage a good investment strategy?

However, for new technologies, the investment cost is lower and the benefit is higher, which has a better investment value than the current energy storage technologies. Additionally, the investment threshold is significantly lower under the single strategy than it is under the continuous strategy.

What is the investment opportunity value of energy storage technology?

A firm choosing to invest in energy storage technology is equivalent to executing the value of the investment option. In this study, the investment opportunity value of an energy storage technology is denoted by  $F(P)$ , that is, the maximum expected net present value when a firm invests in an energy storage technology.
