Classifying vehicles as fixed assets affects both the balance sheet and income statement. On the balance sheet, vehicles are listed under non-current assets, reflecting their long-term utility to the business. This enhances the asset base, influencing financial ratios such as the debt-to-asset ratio and return on assets (ROA).

Those assets usually have a large value, and their useful life is more than one year. If they are expected to be used for less than one year, they should not consider fixed assets. Some assets are considered fixed assets in one accounting standard, or local regulation might not be considered fixed assets in other standards or regulations.
