

What is a capacitor Assembly?

Capacitor Assemblies take multiple capacitors and build them into a single sub assembly. Read more

What types of capacitors are available?

Two wire-bondable capacitor types are available, vertical caps for wirebond (W type) and horizontal caps for wirebond (E type). This document is non-exhaustive. Customers with specific attachment requirements or attachment scenarios that are not covered by this document should contact Murata. 2.1.

How to pick a capacitor?

Use of a soft tip (like rubber or Torlon®) is strongly recommended for the die picking. A metal tip can damage the capacitor. Please look at the dedicated Application Note "Recommendations handling bare dies". If automatic equipment is used, it is best to use the same tool as for picking. The placement force will depend on the die size.

How do I pack a silicon capacitor?

Standard packing is tape & reel but silicon capacitors can be provided within waffle pack, gelpak or sawing frame. Please contact Murata for drawing and references (mis@murata.com). 2. Capacitor Shape and pad Information 2.1. Capacitor segregation and shape

When to repack a silicon capacitor?

Regarding silicon capacitors, after opening of the packing, the remaining quantities have to be repacked immediately after any process step, in the same conditions as before the opening (ESD bag +N2 is usually preferred). For specific storage conditions, please refer to the dedicated Application Note §171; Storage and shelf life conditions §187;.

What type of wire do I need for a Si capacitor?

Please note that wire material can be specific to capacitor type and finishing. Wire-bondable Si-caps are designed to be assembled with bonding wires on the top side of the capacitor. For any other assembly method, please contact Murata. For W type capacitors, it is expected to have at least one wire on top of the capacitor.
