

What is a battery charger?

A battery charger is a device designed to push electrical energy through a secondary cell or a battery to recharge it. Different types of rechargeable batteries respond best to different types of charging; therefore it is important to know which charger or chargers are applicable for the different batteries that you need to recharge.

What are the different types of battery charging methods?

As there are different chemical contents in different batteries, there are different methods of battery charging that are the most suitable for each chemistry and battery type. There are battery chargers available for standard sizes, including AA, AAA, C, D, and 9V, and there are also battery chargers available for larger lead-acid batteries.

What types of battery chargers do you offer?

Our chargers range from standard 50Hz units for wet batteries to modern high-frequency units for charging large and small, wet and sealed batteries, as well as new fast-charge solutions.

What is the best charger for a car battery?

A charger with a high-amps rating will charge a battery faster than a low-amps model. A high charge rate of 10 or 15 amps will recharge an average car battery in less than four hours. A low charge rate of 2 or 1 amps is ideal for charging motorcycle and lawn mower batteries.

Where can I buy car battery chargers?

Buy Car battery chargers at B&Q - Inspiration for your home & garden. More than 300 stores nationwide. Open 7 days a week. 1000s of DIY supplies.

How do car battery chargers work?

Car battery chargers use the mains supply to recharge your battery. Once plugged in, simply attach the charger to the correct terminals on your car's battery and it will restore its power. Car battery chargers aren't only great at fixing flats, they can also be used to provide what's called a maintenance charge.
