

# Battery charging capacity does not increase

Why is my battery percentage not increasing?

It is also possible that the charger is faulty, and you may need to replace it. This article looks at the problems and offers some troubleshooting tips when it shows charging but the battery percentage is not increasing.

Why is my laptop battery not charging?

If your laptop shows a charger being plugged in, but the battery percentage is not increasing, it could just be a case of software malfunction, or the battery may be too old and charging too slowly. It is also possible that the charger is faulty, and you may need to replace it.

Why does my HP laptop keep charging at 80?

Requires calibration: When the battery has not been calibrated for long, it doesn't correctly judge the charge percentage, and, as a result, the HP laptop battery stops charging at 80. This is also the reason your laptop keeps switching between AC and battery when gaming.

What does full charge capacity mean?

Yes, "Full charge capacity" means the capacity that the battery is managing to achieve. It is not a limit set by Windows or anything else; it is merely a reading of what the battery can actually do. You can use the comparison of Full charge capacity with Design capacity to decide when to buy a replacement battery [I do the same regularly].

What causes a battery to stop charging at 80%?

Hardware issues: Batteries physically damaged or ones with a hardware malfunction, too, show such errors. Calibration needed: If the battery hasn't been calibrated recently, your system may misread the charge percentage, causing the battery to stop charging at 80%.

How to reset Windows 11/10 if battery percentage is not increasing?

Simply shut down your laptop while still in charging mode. Restart and see if it helps. If not, follow the given methods. One might work for you if your battery percentage is not increasing. A soft reset is where you use the Reset This PC option to reset your Windows 11/10. But we are not resetting Windows OS here.

The design battery capacity on this laptop is listed at 52,976 mWh and the full charge capacity at the time of purchase is 53,302 mWh. As expected, this number declined and reached to its lowest at 33,418 mWh throughout the entire month ...
