How to connect a battery bank with a BMS?

For the communication with BMS, please connect communication cable between the primary unit and the battery. Parallel diagram as below: If you connect one battery bank shared by multiple inverters as the diagram above, please enable "Battery shared". Please check if the parallel communication cables are firmly connected.

How to connect multiple inverters to a parallel system battery?

For parallel system battery connection, we support 2 connection ways, you can either connect all inverters to one battery bank or connect each inverter to separate battery group. For above system in this document, it is each inverter connected to separate battery. If you want all inverters share the battery, please connect the system as below.

What protocols are used in e-bike battery management systems?

In the ever-evolving domain of Battery Management Systems (BMS), the seamless interplay of communication protocols serves as the backbone for optimal functionality. The exploration of four key protocols--CAN Bus, UART, RS485, and TCP--highlights the intricate tapestry woven to ensure efficient data exchange within e-bike battery systems.

How do I connect multiple batteries to a Jack?

If only one battery is available, insert the plug into the jack BAT1. If multiple batteries and/or an automatic transfer switch are available, insert the communication connection of the first battery into the jack BAT1 and connect all other communication cables in succession to the respective jacks.

How many batteries can a LV-hub connect to?

CAN: CAN-Bus-protocol-PYLON-low-voltage-V1.2-20180408 or above. RS485: RS485-protocol-pylon-low-voltage-V3.1-20180408 or above. 3.2 Cables Connection for US2000/US3000 under RS485 or CANBUS. Each battery group can configure maximum 8pcs US2000B Plus or 8pcs US3000. LV-Hub-A configures maximum 5 group batteries.
