How much will battery electric cars cost in 2026?

Our researchers forecast that average battery prices could fall towards \$80/kWh by 2026, amounting to a drop of almost 50% from 2023, a level at which battery electric vehicles would achieve ownership cost parity with gasoline-fueled cars in the US on an unsubsidized basis. Source: Company data, Wood Mackenzie, SNE Research, Goldman Sachs Research

According to the survey, average battery prices are expected to slip below \$100 per kWh as soon as 2026. This is widely considered the "price parity" threshold with ICE vehicles.

The battery had become really really annoyingly short lived between charges in 2021. In 2022, it started to randomly crash and restart shortly after being unplugged from the charger. Took it in to get battery changed. Yup, battery was at 65% capacity, and showed in the Apple diagnostic tools, used at the Genius Bar, that it

needed to be changed.

Metals consist of roughly 60 percent of the cost of an EV battery. And from 2023 to 2030, Goldman estimates that 40 percent of the decline in the price of battery capacity will come directly from lower commodity costs. Nickel-based EV batteries, as well as lithium-iron-phosphate (LFP) batteries, will both benefit from lower commodity prices.

I have replaced my key fob batteries on a couple of occasions but it still indicates that the battery is low. Am i missing something here that i should do after installing new batteries? ...
