

What is a supercapacitor battery?

With high power and long cycle life, supercapacitor battery can be used in separate energy storage scenarios with short-term high power and multiple cycle discharges, or form a hybrid energy system with lithium batteries to achieve complementation and synergy with energy-based lithium batteries.

Are supercapacitors a power-type energy storage device?

As a power-type energy storage device, supercapacitors complement and synergize with energy-type lithium batteries by virtue of their high power and long cycle life characteristics. Lithium batteries, as energy-based energy storage devices, have been widely used in various long-term energy storage scenarios.

What is the energy density of hybrid supercapacitor battery?

Supercapacitor battery is penetrating into emerging applications such as new energy buses, power grid frequency modulation, energy storage, and vehicle start-stop. According to the data, the current energy density of hybrid supercapacitor battery can reach 80~160Wh/kg, and the system energy density has exceeded 40Wh/kg.

How big is China's supercapacitor battery market?

In 2021, the size of China's super capacitor market will reach 2.53 billion RMB, and it is expected to exceed 6 billion RMB in 2027. In 2021-2027, the market size CAGR will exceed 20%. Supercapacitor battery is penetrating into emerging applications such as new energy buses, power grid frequency modulation, energy storage, and vehicle start-stop.

What are the upstream materials of supercapacitor battery?

The upstream materials of supercapacitor battery mainly include electrodes, electrolytes, diaphragms, leads, etc. The electrodes, electrolytes, and diaphragms account for about 35%, 30%, and 20% of the cost, respectively.

Are supercapacitor batteries accelerating inflection point?

Since 2022, supercapacitors have been used in China for the first time in integrated fire-storage peak shaving and frequency regulation, primary frequency regulation, and shore-storage integration projects for the first time. The supercapacitor battery industry is ushering in an accelerated inflection point.
