These standards have been replaced with a revised version of the standard, or by a compilation of the original active standard and all its existing amendments, corrigenda, and errata. 1106-2005 IEEE Recommended Practice for Installation, Maintenance, Testing, and Replacement of Vented Nickel-Cadmium Batteries for Stationary Applications

The maximum discharge rate for a Ni-Cd battery varies by size. For a common AA-size cell, the maximum discharge rate is approximately 1.8 amperes; for a D size battery the discharge rate can be as high as 3.5 amperes. [citation needed] Model-aircraft or -boat builders often take much larger currents of up to a hundred amps or so from specially constructed Ni-Cd batteries, ...
