

# Can I unplug the power supply if I disconnect the battery

Should you unplug a laptop battery when fully charged?

However, you should NOT unplug the battery when fully charged. Every time you unplug the power and use it on battery, you degrade the battery; they are only good for a finite number of charges. In addition, if you use it on battery at your desk, and then need to go portable, you might not have much use time left.

When should I unplug my laptop?

Unplugging your laptop when the battery is fully charged is wise. Staying plugged in can cause power draw, overheating, and fire risks. Constantly charging may harm battery capacity and speed up discharging cycles. For better battery health, disconnect your laptop once it reaches 100% charge.

Should I Disconnect my computer from power if the battery is full?

If you are asking if you should disconnect your computer from power once the battery is full, the answer is no. If you do so, your battery will keep discharging and charging. The number of times batteries can be charged is limited and if you unplug your computer every time it is full, it will quickly die.

Should you unplug a lithium ion battery?

Some of this is true for ALL Lithium-ion batteries. However, you should NOT unplug the battery when fully charged. Every time you unplug the power and use it on battery, you degrade the battery; they are only good for a finite number of charges.

What happens if a battery adapter is plugged in?

I found out that when battery is in and then the adapter is plugged, the adapter shuts off (output voltage gradually drops to 0), and the only way to restart it is to unplug it from AC power and plug it in again. Personally I wouldn't risk it. If, as you say, the power cord is short there's a good chance it'll come out during the operation anyway.

Can a power supply be disconnected from the mains?

Now if the power supply has an on-off button, you can disconnect the whole power supply from the mains, which turns off that tiny section of the power supply which provides 5v stand-by and the power supply is basically disconnected from the power cable, it's a physical/mechanical switch, the cable with electricity is interrupted.

This button resets the battery, ACPIs, and other power controls of the laptop. You can find the button at the back of your laptop near the RAM compartment. Shut your ...

Don't do that. Not only will it probably not work, you might damage the connectors by repeated use like that. Just unplug the laptop from the power cord. You will deteriorate your battery by ...
