

What are the different types of ceramic capacitors?

The two most common types of Ceramic Capacitors are: Ceramic Disc Capacitors - These are often used as safety capacitors in electromagnetic interference suppression applications. Multi-layered Ceramic Capacitors - Ceramic capacitors with multilayer style (MLCC) are widely used and produced capacitors applied in the electronic equipment.

What are the applications of ceramic capacitors?

Applications of ceramic capacitors cover a wide spectrum, ranging from mobile phones, tablets, computers and most electronic circuits, serving several functions. While most MLCC are rated not over 5 Volts, Samsung has come up with 16 V rating for automobile industry, considered world's highest under this category.

What is the capacitance of a ceramic chip capacitor?

They have capacitance values in the range of 10pF to 100mF. Ceramic Chip Capacitors: These ceramic chip capacitors are widely used in consumer electronics, communication devices, and also in different digital applications. Ceramic capacitors are categorized into multiple dielectric classes based on the type of dielectric material used.

What is a ceramic disc capacitor?

Due to their compact size and cost-effectiveness, ceramic disc capacitors are used in various electronic circuits. They are suitable for filtering and coupling applications, offering reliability in a concise form factor. Multi-layer ceramic Capacitors (MLCCs) are a more advanced and widely used form of ceramic capacitor.

What is a ceramic capacitor on a radio?

The typical style for ceramic capacitors beneath the disc (at that time called condensers) in radio applications at the time after the War from the 1950s through the 1970s was a ceramic tube covered with tin or silver on both the inside and outside surface.

Which type of capacitor acts as a dielectric?

A fixed value type of capacitor where the ceramic material within the capacitor acts as a dielectric is the Ceramic Capacitor. This capacitor consists of more number of alternating layers of ceramic and also a metal layer which acts as an electrode.
