How does solar LED street lighting work?

Solar driven LED street lighting provides high-quality, cost-efficient lighting using sunlight instead of conventional electricity. During the day a solar panel converts solar energy into electrical energy that is stored in a battery. When night falls, the battery discharges, releasing enough power for the LED luminaire to light the road.

How does a solar panel light a road?

During the day a solar panel converts solar energy into electrical energy that is stored in a battery. When night falls, the battery discharges, releasing enough power for the LED luminaire to light the road. As this lighting solution does not consume any conventional energy, its carbon emissions during use are zero.

How long do solar lights last?

Since they're grid connectable, the lights can send excess power from the wind turbines and solar panels back through the grid. The constantly moving turbine technology in the lights should last twenty years, requiring just an annual maintenance check-up, barring natural disasters or accidents.
