What is a HVCB series circuit breaker?

HVCB Series is a live tank, free standing three-pole outdoor SF6 Circuit Breaker for power substations up to 145kV 1200 A, 2000 A and 3000 current ratings are typically required for both main breaker and bus-tie breaker applications.

What is a grading capacitor?

Grading Capacitors utilizing conventional fluid insulation are used within HV networks for various purposes, such as carrier application, transient overvoltage reduction or circuit breaker switching capability enhancement, with the proven Trench design and highest reliability.

What are the different types of DC circuit breaker topologies?

There are mainly three kinds of DC circuit breaker topologies: mechanical DC circuit breaker (MDCCB), solid-state DC circuit breaker (SSDCCB), and HDCCB. HDCCB offers benefits of the MDCCB and SSDCCB, which has the characteristics of short breaking time, small on-state loss and arc-free breaking.

How does a countercurrent injection branch capacitor affect commutation speed?

Using the rapid discharge of the countercurrent injection branch capacitor provides zero current turn-off condition for the transfer branch thyristor, which indirectly accelerates the current commutation speed. When the voltage across DCCB reaches the operating voltage of MOV, the third current commutation begins.

How does capacitor C1 affect the commutation speed of hdccb?

2) Capacitor C1 in the Resonant Current Injection Branch: The capacitor energy in the LC resonant branch directly affects the breaking speed of HDCCB and the overvoltage capability of multiple thyristors. Fig. 9 shows the commutation capability and time of second commutation process under different capacitors C1. Fig. 9.
