

What is a coupling capacitor used for?

Coupling capacitors are used to transmit communication signals to transmission lines. Some are even used to measure the voltage in transmission lines. In signal transmission, it is part of a power line carrier circuit. A coupling capacitor is used in the circuit in conjunction with the line trap.

What is a coupling capacitor & a line trap?

A coupling capacitor is used in the circuit in conjunction with the line trap. Line traps can be installed at the substation or on the transmission line tower.

What are power capacitors used for?

These power capacitors are used in various electrical applications and widely demanded in national as well as international markets. Manufactured from high quality material using latest technology, these capacitors provide reduced maintenance cost, trouble free function and safe usage.
