

Crystalline silicon photovoltaic cells exported to Tehran

What happens if a crystalline silicon photovoltaic product is imported?

If the ITC makes affirmative final determinations that imports of certain crystalline silicon photovoltaic products from China and/or Taiwan materially injure, or threaten material injury to, the domestic industry, Commerce will issue AD and CVD orders, as applicable.

Which crystalline silicon photovoltaic cells are excluded from the scope of this investigation?

Also excluded from the scope of this investigation are modules, laminates, and panels produced in China from crystalline silicon photovoltaic cells produced in Taiwan that are covered by an existing proceeding on such modules, laminates, and panels from China.

Are crystalline silicon photovoltaic cells covered by antidumping and countervailing duty orders?

Further, also excluded from the scope of this investigation are any products covered by the existing antidumping and countervailing duty orders on crystalline silicon photovoltaic cells, whether or not assembled into modules, laminates and/or panels, from China.¹

When did the five-year (sunset) review of crystalline silicon photovoltaic cells & modules start?

The five-year (sunset) reviews concerning Crystalline Silicon Photovoltaic Cells and Modules from China were instituted on February 1, 2024. On May 6, 2024, the Commission determined to conduct expedited five-year reviews.

Are crystalline silicon photovoltaic products sold in the United States?

Commerce determined that imports of certain crystalline silicon photovoltaic products from Taiwan have been sold in the United States at dumping margins ranging from 11.45 percent to 27.55 percent.

Are China's crystalline silicon photovoltaic products a countervailable subsidy?

Commerce also determined that imports of certain crystalline silicon photovoltaic products from China have received countervailable subsidies ranging from 27.64 percent to 49.79 percent.

Since the Commission's safeguard extension proceeding, there have been a number of significant developments, including: (1) several announcements of plans to start domestic CSPV cell ...

The merchandise covered by this order is crystalline silicon photovoltaic cells, and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels and building integrated materials.

3 requested that we reject Suniva's request for an administrative review on the grounds that Suniva lacked the requisite standing to file the request.¹⁰ On May 22, 2019, Suniva timely withdrew its request for review in its

Crystalline silicon photovoltaic cells exported to Tehran

entirety.¹¹ On May 24, 2019, Chint Solar timely withdrew its request for a review of its own POR entries, and requested that we rescind the review of Chint ...

Countervailing Duty Administrative Review: Certain Crystalline Silicon Photovoltaic Products from the People's Republic of China; 2017 ____ I. Summary The Department of Commerce(Commerce)has completed the administrative review of the ... and/or exported" by Trina Solar during the POR.On September 3, 2019, CBP responded to our August 28 ...

At present, the global photovoltaic (PV) market is dominated by crystalline silicon (c-Si) solar cell technology, and silicon heterojunction solar (SHJ) cells have been developed rapidly after the concept was proposed, ...

The estimated average lifespan of crystalline silicon solar panels is about 25 years. Still, premature waste through damage to equipment during transportation, installation, natural disasters (hails, hurricanes, storms, landslides) and fire accidents [16] is generated in significant quantities. By 2050, it is projected that up to 78 million metric tons of solar panel ...

The views of the Commission are contained in USITC Publication 5546 (September 2024), entitled Crystalline Silicon Photovoltaic Cells and Modules from China: ...

The merchandise covered by this order is crystalline silicon photovoltaic cells, and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels and building integrated materials. 4

The U.S. International Trade Commission (USITC) today determined that revoking the existing antidumping and countervailing duty orders on crystalline silicon ...

The photovoltaic industry is in a phase of rapid expansion, growing at over 30 % per annum over recent years. Although technologies based on thin-film compound and alloy solar cells are under active development, most commercial solar cells presently use self-supporting bulk crystalline or multicrystalline silicon wafers, similar to those used in microelectronics.

A regional level study of the demand for silicon-related materials (Silica sand, MG-Si, SoG-Si, Wafers, Cells) and embodied GHG emissions in China's photovoltaic industry could provide a ...
