

Directly remove the battery from the mobile hard disk

How do you remove a battery from a phone?

For phones with sealed batteries, the process is slightly more complicated. A small slit will need to be made in the back of the phone in order to access the battery. To do this, use a small knife or razor blade to make a small incision in the back of the phone. Once the incision is made, the battery can be carefully removed from the device.

How do you remove a battery from a Lenovo laptop?

While keeping the latch slid with one hand, grab the battery with the other hand and remove it by pivoting it upward. At this point some users would turn the laptop upside down once again and press the power button a couple of times. They say that this should help dissipating all of the remaining electricity around the device.

How do you remove a chip from a phone?

It's a chip soldered to the main board in the phone. You can only remove it by desoldering it from the board in a soldering oven. (This is a precisely temperature-controlled device: a kitchen oven won't do.) Even if you did manage to desolder it safely, the chip itself isn't a lot of use to you.

How do you store a phone battery?

Be sure to store the battery in a safe and dry place, as it can be damaged by moisture. If you are unable to remove the battery with a screw, it is likely that the battery is sealed in place. In this case, a small slit may need to be made in the back of the phone to access the battery.

What happens if a computer is off but on battery?

If your computer is off, but on battery you know that the OS is not in the middle of writing to the disk, and it is a new drive so presumably no data to get garbled. Is it really that hard to remove the battery? Why risk it? Believe me, I tried... The screws were tiny and fragile.

Is it safe to remove battery before repairing a hard drive?

SSD drives are often hot swappable, so I don't think this will be a problem. In cases where the battery is external, I do prefer to remove the battery before diving into the repair process. Yes, it's normally safe, not recommended practice, but I can't think how it could hurt the drive if the drive is not active.

Mobile hard disk is USB interface? The following function can only eject the U disk, not the mobile hard disk?

```
public static List<string> GetMoveDisk() { List<string> lstDisk = new List<string>();  
...  
}
```

But right after I put the battery in, plugged power back in, turned the computer on, there were loud clicking noises. I think they were coming from one of my HDD's, because PC doesn't detect the hard drive anymore. I
