4 ???· The heat from solar energy can be stored by sensible energy storage materials (i.e., thermal oil) [87] and thermochemical energy storage materials (i.e., $\text{CO}_3\text{O}_4/\text{CoO}$) [88] for heating the inlet air of turbines during the discharging cycle of LAES, while the heat from solar energy was directly utilized for heating air in the work of [89].

The significance of high-entropy effects soon extended to ceramics. In 2015, Rost et al. [21], introduced a new family of ceramic materials called "entropy-stabilized oxides," later known as "high-entropy oxides (HEOs)". They demonstrated a stable five-component oxide formulation (equimolar: MgO , CoO , NiO , CuO , and ZnO) with a single-phase crystal structure.
