How much does a solar PV installation cost?

With the average cost of a solar PV installation around £6,500, some households may struggle to see financial benefits over the lifetime of the panels, although other environmental benefits may tip the scales. 1. Solar panels for homes 2. Feed-in tariff 3. Smart Export Guarantee 4. Is solar a good investment? 5. Summary

Can solar panels save you money?

Solar panels could help you save £100s a year on your electricity bills. Using the energy you generate can mean big savings for some households. You can get paid to export electricity you generate but don't use through the smart export guarantee (SEG). An average home could earn up to £320/year.

How much does it cost to install solar panels on a roof?

They might also suggest increasing the number of solar panels on your roof to provide more electricity for your hot water needs. Generally, domestic solar panel systems are around 3.5 kWp and cost around £7,000. You can lower the cost of installation costs if you already have scaffolding up for roof repairs or if you're building a new house.

Can solar panels be profitable?

Installing solar panels and signing up to an SEG tariff is unlikely to be anywhere near as profitable as FIT rates were just a few years ago for two reasons: All energy suppliers with more than 150,000 customers are required to offer a Smart Export Guarantee tariff and a couple have voluntarily decided to offer them.

How much do solar panels make a year?

The Energy Saving Trust estimates a typical household based roughly in the middle of the country could make between £270 and £400 a year based on a rate of 15p per kWh (though of course, the better the rate, the more you'll make). If you had solar panels installed before 31 March 2019, it's likely you'll be on a feed-in tariff (FIT).
