

What size battery do I Need?

To work out what size battery you'll need, you can start by calculating your electricity usage. Look at either your smart meter or your monthly energy bill, which will tell you how much you use on average. Then, divide by thirty to get a rough estimation of your daily energy use, and you'll be able to work out what size battery is best for you.

What size solar battery do I Need?

The size of the solar battery you need will depend on the size of your home-- specifically, how many bedrooms it has. To work out what size battery you'll need, you can start by calculating your electricity usage. Look at either your smart meter or your monthly energy bill, which will tell you how much you use on average.

How do I choose the right solar battery size in the UK?

To pick the right solar battery size in the UK, you need to know your home's energy use. Most homes use between 5 and 10 kWh daily. Factors like peak demand, battery efficiency, and whether you live on or off-grid affect which solar battery size will work best for you.

What is the physical size of a battery?

The physical size of the battery is the height, width, and depth of the battery unit, which determines how much space it occupies. This determines where the battery can be installed in your home, with most batteries fitting into basements, garages, and cupboards. Today, the average size of a battery is smaller than a washing machine.

How much battery storage do I Need?

Small Households (1-2 Bedrooms): Typically need around 2-4 kWh of battery storage. Medium Households (3 Bedrooms): Usually require about 8 kWh of battery storage. Large Households (4+ Bedrooms): May need 9.5 kWh or more. Daily Energy Consumption: Calculate your daily energy usage to determine the size of the solar battery you need.

Why is battery size important?

What matters more is the capacity of the battery, which, confusingly, is also often referred to as the battery size. Which refers to the amount of energy the battery can store and deliver, measured in kilowatt-hours (kWh). The higher the capacity, the longer your house can be powered.
