Can a lead acid battery be connected in parallel?

In theory it is OK to connect them in parallel with two conditions: Each battery must be in a state where it can be voltage charged. This is fine for lead acid batteries unless they are very run down. Very discharged lead-acid batteries have to be charged with fixed current until they get to a minimum voltage, then they can be voltage charged.

What is a series parallel battery system?

Series-parallel-connected batteries involve connecting more than one battery to increase both the amp-hour capacity of the battery as well as the voltage. Connecting six 6V 100Ah batteries will yield a 24V 200Ah battery system using two strings of four batteries.

How does a lead battery work?

The less current is delivered by a lead battery, the longer the battery lasts. The series connection of two identical batteries allows to get twice the rated voltage of the individual batteries, keeping the same capacity.

How do you wire a battery in series?

For more information on wiring in series see [Connecting batteries in series](#), or our article on building battery banks. The basic concept is that when connecting in parallel, you add the amp hour ratings of the batteries together, but the voltage remains the same. For example:

What is a parallel battery connection?

Below you will find some very clear images in order to easily understand the battery connections. The parallel connection of two identical batteries allows to get twice the capacity of the individual batteries, keeping the same rated voltage.

Can a lead acid battery be voltage charged?

Each battery must be in a state where it can be voltage charged. This is fine for lead acid batteries unless they are very run down. Very discharged lead-acid batteries have to be charged with fixed current until they get to a minimum voltage, then they can be voltage charged. The power supply is capable of maintaining the fixed float voltage.

The generator already manages the lead acid batteries to keep them from being over charged/discharged so as far as I can tell, swapping the internal lead acid battery with a ...
