Why should you use a home charging station?

If you have a home charging station you can make this available to other people to earn an additional income. Using smart technology means that charging sessions for your vehicle can be scheduled at off-peak hours; at these hours energy tariffs are lower resulting in lower prices for consumers.

Should you connect a connected EV charging station to a charging app?

Linking a connected EV charging station to a charging app on your phone or tablet allows you to leverage the charger's full potential. While there is a range of different charging apps, they often all share the same fundamental features, including the ability to monitor and control the charging session and customize its settings to your needs.

Why do EV charging points need a smartphone app?

The majority of charging points are compatible with a smartphone app which can supply charging status/Kwh/money spent/saved from smart charging which can help save energy and money. Smart charging reduces the need for heavy investment into the grid, as EVs can be used as electricity storage (1). How much does charging cost and time taken to charge:

What is an EV charging station?

An EV charging station, or electric vehicle supply equipment (EVSE), is an electrical device that recharges the batteries of electric vehicles (EVs). As more EVs hit the road, increasing EV charging stations will be crucial. We usually come across two types of EV charging stations: standalone and networked charging stations.

Are networked EV charging stations better?

Between the two, networked charging stations offer more benefits. Connecting multiple EV charging stations helps you build an EV charging system that enables operators to manage energy usage easily and remotely through application platforms.

What happens when EVs are plugged in at an EV charging station?

When EVs are plugged in at an EV charging station, the EV charging station, the grid, and the ESS exchange information such as battery charging status, the electricity capacity, and the energy usage through a wireless or wired network.
