

How to modify the power cord of the battery pack

How do you connect a battery pack to a power supply?

This kind of connector can be used to switch the device from running on the battery pack to running on the power supply whenever the it is plugged in. To wire up this jack to the rest of the circuit, cut the wire coming from the positive terminal of the battery pack in half.

How do you connect a battery pack to a power jack?

Connect the wire coming from positive terminal of the battery pack to pin 2 on the power jack. Then connect the other part of the cut wire that goes to the circuit to pin 1 on the power jack. Lastly connect the negative wire from the battery pack and the circuit to pin 3 on the power jack. This will create a common ground line.

How do you connect a power supply to an electrical device?

Another option for connecting the power supply to the electrical device is to use a substitute or dummy battery. This is anything that takes the shape of the battery and fits in the battery housing, but is used to connect the power supply to the terminals of the battery connectors on the device.

Can an old AC power adapter power electronics instead of batteries?

We use battery power to drive a lot of our electronics. But if an electrical device doesn't need to be portable all the time it would be nice to be able to power it with AC and not waste the batteries. So in this project, I show you how to modify an old AC power adapter so that it can power your electronics instead of batteries.

How do I use a 9v battery?

You would connect your DC 9V source to a plug identical to the one coming out of the adapter and plug that into the power jack on the tablet. A small 9V battery is not sufficient. Your best bet would be a lithium battery. It would run fine off 3 18650 cells in series and a 9V switching regulator.

How do you connect a battery to an AC adapter?

Solder one end to the negative terminal of the battery compartment, and solder the other end to the NC switch connector (3 o'clock position) on the AC socket. When the AC adapter is not plugged in this provides the return path from the circuit board to the batteries' negative terminal. Strip the ends of the red wire the same way.

If your intention is to cut the cable and power the lamp with a battery instead of the output of the mains adapter, then I expect it won't matter. ... To change back to plug pack ... Dropped ...
