

How do I keep my phone battery healthy?

Avoid full charge cycles (0-100%) and overnight charging. Instead, top up your phone more regularly with partial charges. Limiting your smartphone's maximum charge to 80-90% is better for the battery's health than topping up to completely full everytime. Use fast charging and wireless charging technologies sparingly and when your device is cool.

How to charge up your phone battery correctly?

If you want to charge up your phone battery correctly, you should have the best opportunities to do so in your personal daily schedule. This is often only possible with clever accessories. As a result, when selecting accessories, pay attention to the connections and charging technologies that your smartphone supports.

Should I recalibrate my phone's battery?

According to iFixit, you might want to consider recalibrating your phone's battery periodically to sync its actual state of charge with what Android's battery reading displays. You can do this by charging your phone to 100%, keeping it there for a few hours, using it until the battery dies, and then fully charging it again.

How to clean a mobile phone battery?

For the battery to work properly, your mobile phone needs to be clean. Keep it away from dust, sand and liquids. Charging improves if the connectors are kept clean. The same goes for the charger: Prevent it from getting dirty, clean it with a damp cloth while it is switched off and do not squash or twist the cable.

How often should a mobile battery be charged?

Currently mobile charging systems disconnect from the network when they detect that charging is complete. Charging periods are also fragmented to avoid overheating. However, as we pointed out above, it is not recommended to charge the battery more than 80% on a daily basis. 6. Never let the battery overheat
