

Install photovoltaic solar panel hanging basket in the courtyard

How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

How do I choose a solar panel mounting system?

To make sure that your solar panels last a long time, you need to choose a solar panel mounting system that fits the PV panels and the specific surface they'll be installed on. This means checking that the mounts can hold the weight and size of your panels and are designed for your specific roof or ground conditions.

Can a DIY solar panel installation save you money?

Embarking on a DIY solar panel installation can be rewarding, offering significant cost savings and a better understanding of your home's energy systems. We'll help guide you to simplify the process, from initial planning and preparation to the final steps of connecting your system to the grid.

Why should you invest in a solar panel mounting system?

There are many benefits to investing in the right solar panel mounting system from the start. In the long run, it'll mean less maintenance. When it's mounted correctly, the solar PV system is less likely to need frequent adjustments or repairs, which saves you both time and money.

How do you secure solar panels to a roof?

Clamps can be used to secure solar PV systems directly to the standing seams, providing a robust and leak-free installation. Ballasted systems, which use weights to secure the panels, are popular because they don't need to penetrate the roof, reducing the risk of leaks or damage.

Can solar panels be mounted on a standing seam roof?

Here, specialised panel mounting systems are used. Standing seam roofs are also an excellent choice for mounting solar panels. Clamps can be used to secure solar PV systems directly to the standing seams, providing a robust and leak-free installation.

how ever, i finally put a watt meter on the setup and saw just how little power the panel was producing, so i investigated this. i found that the windshield was likely blocking 90% of the uv rays that ...
