

How do I install my givenergy battery system?

Your GivEnergy battery system must be fitted by an approved installer. The installer will talk you through appropriate installation locations when they come to assess your project. When it comes to positioning, the battery storage system is designed to be wall mounted or ground mounted, and always kept in an upright position.

Should you add a battery to your home?

Adding a home storage battery means you can get the most from your renewables and enjoy cheap energy morning, noon, and night. Plus, this concept of consistent low-cost energy also applies during outages. With domestic battery storage, you can protect your supply from disruption, keeping your home powered even when the grid is down.

How long does it take to install a domestic battery storage solution?

With any installation - indoors or outdoors - your installer should leave adequate clearance around the system for ventilation. Generally, your installer will be able to fit and commission your domestic battery storage solution within a single day. 09 Will I need to manage my domestic battery storage solution?

Should a battery energy storage system be installed on an external wall?

If a battery energy storage system (BESS) is installed on the external wall of a building, it should not compromise the fire performance of the external wall. Service penetrations should be adequately fire-stopped, and internal combustible substrates should not be exposed by the installation.

Can I add domestic battery storage to my solar array?

Having energy stored cuts this reliance on using the grid during peak hours. So, your domestic battery storage system can clean up the grid, cut your home's CO₂ emissions, and help you do your bit towards a net zero world. 04 Can I add domestic battery storage to an existing solar array? Absolutely - in fact, we highly recommend doing so.

Can a storage battery take its charge from renewables?

In the first instance, a storage battery can take its charge from renewables. (I.e., from solar panels, or wind or hydro turbines.) So, you can charge your battery using free, green sources. And, because the energy from renewables is intermittent, a storage battery allows you to harness it more efficiently for consistent use.
