What is a lithium ion capacitor 3300f prismatic cell?

Higher operating voltage. Extremely low leakage. The Lithium Ion Capacitor 3300F Prismatic Cell is an Ultra Low Resistance ULTIMO Cell. A Lithium Ion Capacitor is a super-capacitor also called an ultra-capacitor. These LIC Laminate cells are available stacked in a modular form.

What are the advantages of pre-doping a lithium ion anode?

Key Technology: Pre-doping the anode with lithium ions provides: Higher Capacitance, Higher Voltage, and Higher Energy Density. A Master Controller is used to balance between modules. Unique laminate design retains 95% of charge for >3 months and can be cycled up to 1 million times. High accurate inter-cell voltage balance control.

Why should you choose a lithium ion LIC?

LICs have extremely low leakage current at 50% SOC. Key Technology: Pre-doping the anode with lithium ions provides: Higher Capacitance, Higher Voltage, and Higher Energy Density. A Master Controller is used to balance between modules. Unique laminate design retains 95% of charge for >3 months and can be cycled up to 1 million times.

Abstract. Prelithiated nanoporous carbons were applied as an anode material in lithium-ion capacitors to achieve high-power performance. Nanoporous carbon anodes with different pore structures, graphitization degrees, and prelithiation conditions were comparatively investigated for their rate performance, self-discharge property, and full-cell performance.
