

What materials are used to store energy?

Materials like molten salts and phase-change materials are commonly used due to their high heat capacity and ability to store and release thermal energy efficiently. Mechanical energy storage systems, such as flywheels and compressed air energy storage (CAES), are used to store kinetic or potential energy.

What are the different types of energy storage?

Note that other categorizations of energy storage types have also been used such as electrical energy storage vs thermal energy storage, and chemical vs mechanical energy storage types, including pumped hydro, flywheel and compressed air energy storage.
