How much does a battery electric vehicle cost in 2022?

For battery electric vehicle (BEV) packs in particular, prices were \$138/kWh on a volume-weighted average basis in 2022. At the cell level, average BEV prices were just \$115/kWh. This indicates that on average, cells account for 83% of the total pack price.

How much will lithium-ion batteries cost in 2022?

After more than a decade of declines, volume-weighted average prices for lithium-ion battery packs across all sectors have increased to \$151/kWh in 2022, a 7% rise from last year in real terms. The upward cost pressure on batteries outpaced the higher adoption of lower cost chemistries like lithium iron phosphate (LFP).

Will lithium-ion battery prices decline in 2025?

BNEF forecasts pack prices to decline by USD 3 per kWh in 2025. (USD 1 = EUR 0.950) The global average price of lithium-ion battery packs has fallen by 20% year-on-year to USD 115 (EUR 109) per kWh in 2024, marking the steepest decline since 2017, according to BloombergNEF's annual battery price survey, unveiled on Tuesday.

What happened to battery prices in 2024?

New York, December 10, 2024 - Battery prices saw their biggest annual drop since 2017. Lithium-ion battery pack prices dropped 20% from 2023 to a record low of \$115 per kilowatt-hour, according to analysis by research provider BloombergNEF (BNEF).

Will battery pack prices drop again next year?

Given this, BNEF expects average battery pack prices to drop again next year, reaching \$133/kWh (in real 2023 dollars). Technological innovation and manufacturing improvement should drive further declines in battery pack prices in the coming years, to \$113/kWh in 2025 and \$80/kWh in 2030.

1 ???· BloombergNEF is holding an annual two-day summit on transport, energy and technology in San Francisco. Here are four big takeaways from the first day.
