

What is a battery separator?

A battery separator is a permeable membrane that keeps the anode and cathode, the battery's electrodes, apart to avoid an electrical short circuit. It is a critical component. The anode is the positive electrode, and the cathode is the negative electrode.

How do Energain Battery Separators work?

DuPont's Energain battery separators are laid as a web using a proprietary spinning process that creates continuous filaments with diameters between 200 and 1000 nm. The Energain separators take nanofibre possibilities a stage further, exhibiting stability and low shrinkage at high temperatures, while being highly saturable in electrolyte liquids.

What is a 5 micrometer battery separator?

At just 5 micrometers, they increase energy density while maintaining durability, leading to longer battery life cycles and lower costs through improved performance and streamlined manufacturing. Our separators enhance consumer electronics with advanced safety, thermal stability, and efficient ion flow.

What is a GNEM battery separator?

GNEM battery separators enhance electric vehicle performance by offering superior safety, reliability, high thermal stability, and low ionic resistance. Their innovative design ensures efficient ion flow, reducing energy loss and extending battery life. GNEM's ultra-thin, high-performance separators enhance battery efficiency and safety.

Where are lithium ion battery separators made?

The company is located in Hualuogeng Technology Industrial Park, Jintan District, Changzhou City, Jiangsu Province, with an annual output of 1 billion square meters of lithium-ion battery separators. The microporous separators are used in lithium ion batteries ranging from new energy vehicles, energy storage, consumer electronics and other fields.

When will lithium ion battery separators be available?

Phase 1 will be in mass production in 2022 and, when Phase 2 is finished by 2024, it will gain 600 million square metres of lithium-ion battery separators annually, which can meet the demand for 60 GWh batteries, corresponding to about 550,000 zero-emission pure electric vehicles.

The U.S. Department of Energy's loans office said on Friday it has finalized a loan of \$1.3 billion to ENTEK Lithium Separators to finance a plant in Indiana for making lithium-ion battery ...
