What is a photovoltaic cell?

Definition: Photovoltaic cells are basically those semiconductor devices that show sensitivity towards light. It has the ability to change radiation energy into equivalent electrical energy. The name of the device itself shows its operation. As the word photo is used for light and voltaic is used for electricity.

What is the basic design of photovoltaic cells?

The basic design of photovoltaic cells involves constructing solar cells on fiber or wire like substrates. Fiber electrodes with functional thin films of active photovoltaic materials on the curved surface are prepared layer by layer, resulting in a three-dimensional structure.
