

What are HYDAC hydraulic accumulators?

ROBUST AND VERSATILE: Wherever hydraulic tasks need to be performed, HYDAC hydraulic accumulators can help. They are versatile, make your machine more convenient to use, secure your hydraulic system and are used to increase the energy efficiency of hydraulic systems and for many other tasks.

How does a hydraulic accumulator work?

Changes in system pressure cause the piston to glide up and down along the shell, allowing fluid to enter or forcing it to be discharged from the accumulator body. The accumulator is empty, and neither gas nor hydraulic sides are pressurized. The accumulator is precharged. The hydraulic system is pressurized.

Can accumulators be recycled?

Accumulators must be depressurized and discharged safely, with the oil being recycled responsibly and the soft parts being separated from the metal. Apex Hydraulics offer a specialist Hydraulic Accumulator recycling service for obsolete or scrap accumulators - contact us for more information.

Where can I find accumulator technology?

Instead, it can be found directly at an individual product level. Accumulator Technology. Accumulator Technology. Product Catalogue. Hydraulic Accumulators in Hybrid Technology.

What happens if the accumulator is empty?

The accumulator is empty, and neither gas nor hydraulic sides are pressurized. The accumulator is precharged. The hydraulic system is pressurized. As system pressure exceeds gas precharge hydraulic pressure fluid flows into the accumulator. System pressure peaks. The accumulator is filled with fluid to its design capacity.

What is accumulator based on?

Accumulator which stores a fluid under pressure and is therefore able to release hydraulic energy. Pressurization is mainly based on gas pressure (air, nitrogen, "hydropneumatic accumulator") and, more rarely, springs or weights (spring accumulator, weighted accumulator).
