

What is solar street lighting?

Solar street lighting refers to street lights that use solar energy for illumination. These systems are particularly suitable for small areas (less than 200 sq ft). Solar street lighting was a promising street lighting option during the first decade of this century and some of these lights are still in operation.

How can you make a solar-powered street light?

To make a solar-powered street light, you can connect two solar panels to a circuit board and then connect the circuit board to two rechargeable batteries. Place the batteries in a plastic box and secure the unit to a wooden plank to ensure it stays upright as a street light. (Two examples are given in the article: 'DIY Solar Light Circuit - Street Light' and 'Simple DIY Solar Light Circuit')

Can solar street lights be installed on walls?

Some solar street lights are designed to be installed on walls. This feature gives you the freedom to choose the precise place where you want them installed, such as on your verandah and patio. It is also important to choose lights that will provide reliable light for years.
