

Solar power supply plus independent charging

Do I need a solar-integrated smart charger?

Once you have your solar system, you need a solar-integrated smart charger. A solar integrated smart charger basically has terminals for a solar or renewable feed, creating a connection between your solar system and EV charger. You can tap into both solar and grid charging by linking the two.

How many independent charging sources can a battery have?

One can have as many independent charging sources running concurrently as they like provided they are programmed properly for the voltage of one's battery bank. Anything else someone might use to charge an off-grid energy storage system. This is true for any battery chemistry.

What are the best solar EV chargers?

No list of solar EV chargers is complete without the Zappi v2, which has smart settings for solar, wind, and micro-hydro generation. It has two ECO charging modes to automatically adjust the charging current in response to on-site generation and household power consumption, charging at speeds up to 7Kw. Our Zappi v2 review gave it 4.3/5.

Can you connect a dumb charger to a solar system?

You can tap into both solar and grid charging by linking the two. It's important to point out that you can't do this with a dumb charger. A dumb charger is a glorified power outlet powered by mains. While you can connect it to your solar system, it will be on or off, with no fine control over the process.
