How much does a lithium battery cost?

Schmuck et al. evaluate the cost of batteries with liquid electrolytes and graphite anode at about \$58 per kWh. For solid-state batteries, they differentiate depending on the anode: with a 20% excess of lithium in the lithium metal anode, they calculate a price of about \$75 per kWh; with a 300% excess, they determine a price of 128 kWh per kWh.

How much will a solid-state battery cost in 2026?

For the ramp-up phase of solid-state batteries, there is also already a forecast of costs: in a study conducted in 2019, CISION PR Newswire estimates the cost at \$400-800 per kWh in 2026, which is four to eight times higher than current battery systems. But how do things look beyond these scaling effects?
