Do solar panels produce alternating current?

Connecting PV panels together in parallel increases current and therefore power output, as electrical power in watts equals "volts times amperes" ($P = V \times I$). Note that photovoltaic panels DO NOT produce or generate alternating current (AC) that you find in your homes. That is, alternating current solar panels do not exist.

How do photovoltaic solar panels work?

As we have seen throughout these alternative energy tutorials, photovoltaic solar panels are semiconductor devices that convert sunlight into electrical DC energy. Connecting PV panels together in parallel increases current and therefore power output, as electrical power in watts equals "volts times amperes" ($P = V \times I$).
