

What is a symmetric battery?

Symmetric battery utilizing $0.3\text{Li}_2\text{MnO}_3 \cdot 0.7\text{LiNi}_{1/3}\text{Co}_{1/3}\text{Mn}_{1/3}\text{O}_2$ is constructed. The cut-off voltages affect the electrochemical properties. Symmetric full cells attract much attention because of various advantages including almost no cell volume expansion, simplified fabrication and reduced costs.

How many Mah is a symmetric battery?

This symmetric battery delivers a high specific capacity of 150.6 mAh g^{-1} , satisfactory mid-discharge voltage of 2.012 V and energy density of 306.4 Wh kg^{-1} at 30 mA g^{-1} between 0.05 and 3.6 V .

Are symmetric all-organic batteries aqueous?

Symmetric all-organic batteries (SAOBs) with the same organic compounds as both anode and cathode have been explored in aqueous or non-aqueous battery systems, but the low working voltage ($< 1 \text{ V}$) and unsatisfactory redox capacity ($\text{Ca. } 50 \text{ mAh g}^{-1}$) limited the energy density of the batteries.

Are symmetric all-organic batteries suitable for energy storage systems?

The proposed all-organic battery exhibits high electrochemical performance. Symmetric all-organic batteries (SAOBs) are promising prospects in realizing low cost, high convenience, and intrinsic safety for energy storage systems. However, the simultaneous pursuit of desired capacities and high voltages poses a significant and challenging hurdle.

What are the advantages of symmetrical batteries?

Symmetric batteries possess various merits including the simplified fabrication and the reduced costs[,], the greatly suppressed volume expansion and the safety concern of lithium dendrites at low working potentials, compared with non-symmetrical batteries employing alloying-type material as anode [13,14].

What is a symmetric lithium-ion full battery?

Herein, for the first time, a novel symmetric lithium-ion full battery is systemically studied constructed with bi-functional Li- and Mn-rich layered oxide $0.3\text{Li}_2\text{MnO}_3 \cdot 0.7\text{LiNi}_{1/3}\text{Co}_{1/3}\text{Mn}_{1/3}\text{O}_2$ (LMROs//LMROs), not involving any prelithiated/predelithiated treatments.
