The charger and battery pack burned together

Why does my phone charger burn out?

Although many chargers do not overcharge, there is a problem of insufficient charging, which is directly caused by a short battery discharge time, that is, a short standby time of the mobile phone. I believe that everyone has a certain understanding of why the charger will burn out.

Can a Ni-Cad burn up a battery?

Your charger circuit is so simple that of course it burns up. I recommend using Ni-MH battery cells (same voltage as the Ni-Cads) and a proper charging circuit for them (it properly limits the charging current then detects a full charge and turns off).

How does a battery charger work?

The charger works under high pressure and high temperature conditions, and the charger is frequently used. After a long time, the parts inside will age, and finally the impact will not be damaged, so When plugged in or when plugged into a battery pack, the charger can be easily broken or even burned out.

How to prevent the original Charger from burning out?

During the use process, you can check the temperature rise of the charger. If it is obviously hot, stop using it and find out the cause to prevent the charger from malfunctioning and burning out. Most of the original charger burnout is caused by the aging of the parts.

Why does my Ni-Cad battery burn out?

Ni-Cad is an old technology with batteries shorting with metallic sliverswhich might be why your chargers burned out. Cadmium is very toxic and is banned in many countries. A Ni-Cad battery develops a "memory" resulting in a very low capacity. Even when not used,a charge does not last long.

Can a mobile phone charger overcharge?

The electronic components inside the charger are more susceptible to damage at high temperatures. Although many chargers do not overcharge, there is a problem of insufficient charging, which is directly caused by a short battery discharge time, that is, a short standby time of the mobile phone.
