The integrated electric vehicle charging station (EVCS) with photovoltaic (PV) and battery energy storage system (BESS) has attracted increasing attention [1]. This integrated charging station could be greatly helpful for reducing the EV's electricity demand for the main grid [2], restraining the fluctuation and uncertainty of PV power generation [3], and consequently ...

There are various factors for selecting the appropriate energy storage devices such as energy density (W·h/kg), power density (W/kg), cycle efficiency (%), self-charge and discharge characteristics, and life cycles (Abumeteir and Vural, 2016). The operating range of various energy storage devices is shown in Fig. 8 (Zhang et al., 2020). It ...

Moreover, a coupled PV-energy storage-charging station (PV-ES-CS) is a key development target for energy in the future that can effectively combine the ...

Incorporation of renewable energy, such as photovoltaic (PV) power, along with energy storage systems (ESS) in charging stations can reduce the high load taken from the grid especially at peak times, however, the intermittent nature of renewable energy sources negatively impacts the grid parameters such as voltage, frequency, and reactive power [3]. With the ...

Solar-thermal conversion has emerged as a vital technology to power carbon-neutral sustainable development of human society because of its high energy conversion efficiency and increasing global heating consumption need (1-4).Latent heat solar-thermal energy storage (STES) offers a promising cost-effective solution to overcome intermittency of solar ...
