

## **There is a current sound when the battery cable is connected**

Why does a battery charger make a clicking sound?

The charging mode is another reason a battery charger makes a clicking sound. The 12 and 6-amp modes are usually quiet and do not produce any clicking sound. However, a boost mode will produce a surge in current, leading to a clicking sound from the charger. Note that the boost mode is usually used when a car's battery is extremely low.

Why does my battery make a loud noise when charging?

If it is making the same amount of noise as before it should be fine. There are going to be some sort of sine with distortion and noise coming from your wall and while it's charging the chargers doing what it's supposed to do, but when your battery is fully charged, the filtering noise occasionally get loud on certain chargers.

Why does my car battery spark when connecting cables?

Over time, the terminals can become corroded from the battery acid. When that happens, the cables will create sparks when connecting the battery. To fix this, clean the battery terminals with a wire brush and baking soda. A loose battery terminal is another reason for car battery sparking when connecting the cables.

Can a car battery spark when connecting?

A car battery is supposed to spark when connecting, so it is normal for a car to spark when you connect. But, if your car battery terminals are corroded, and the cable installation is in the wrong order, you can expect large sparks when connecting the battery.

How do you know if a battery cable is wrong?

Here are some of the most common consequences: The first and most immediate sign of incorrect battery cable connections is often a shower of sparks. This occurs because reversing the cables causes a short circuit, which allows a large amount of current to flow through the wrong pathway.

Why does my battery spark when connecting a negative cable?

It's normal if your battery sparks when connecting negative cable first. There's a procedure for connecting and disconnecting battery cables. Typically, you should connect the positive cables before the negative cables. And when disconnecting, remove the negative cable first before the positive.
