Are there any vanadium flow batteries in the United States?

The United States has some vanadium flow battery installations, albeit at a smaller scale. One is a microgrid pilot project in California that was completed in January 2022.

What is vanadium leasing?

Vanadium leasing, whereby a third-party company leases the vanadium, usually in the form of VRFB electrolyte, to a battery vendor or end-user is a proposed solution beginning to gain market traction.

Is vanadium good for flow batteries?

Vanadium is ideal for flow batteries because it doesn't degrade unless there's a leak causing the material to flow from one tank through the membrane to the other side. Even in that case, MIT researchers say the cross-contamination is temporary, and only the oxidation states will be affected.

Does vanadium have a supply chain problem?

But vanadium comes with its own supply chain issues. As the adoption of long-duration energy storage grows, demand for vanadium will skyrocket. Pure vanadium is rarely naturally occurring, though, and it's usually mined as a byproduct or is otherwise found in compounds. Current production is segmented in China, Russia, and South Africa.

Are there alternatives to vanadium-based flow batteries?

MIT Department of Chemical Engineering researchers are exploring alternatives to today's popular vanadium-based flow batteries. That process requires a strong analysis of how much the initial capital cost will be, informing future adjustments for maintenance or replacement.

How much does a vanadium pentoxide cost?

For leasing to be an attractive option as compared to upfront purchase, vanadium prices must be sufficiently high and/or annual fees must be suitably low. At the time of writing, the price of vanadium pentoxide is ca. 16 \$/kg, which corresponds to 29 \$/kg of vanadium.

The current spot price of vanadium pentoxide on the market is about 100,000 yuan/ton, so the unit cost of processing vanadium pentoxide into electrolyte is about 50,000 yuan/ton. In other words, 2/3 of the cost of electrolyte comes from vanadium pentoxide, and 1/3 comes from processing costs. ... It is the world's largest vanadium liquid flow ...

Previously, State Grid Yingda publicly stated that based on the characteristics of safe use, long service life, low cost throughout the entire life cycle, and independent output power and energy storage capacity of all vanadium flow batteries, State Grid Yingda is conducting in-depth research and practice on commercial operation modes ...

This storage technique is mature and has been in use and applied at a large scale for many years. Benefits to this technology is the long energy storage times in relation to the alternate energy storage systems. The price per unit energy is comparatively low with modest operational and maintenance costs due to the simplicity of the system [31].
