

Can Ammonium vanadate accommodate Zn^{2+} ions?

The rich chemistry of ammonium vanadate ($\text{NH}_4\text{V}_4\text{O}_{10}$, NVO) arising from the double layers of V_4O_{10} and vanadium in high oxidation state makes it a great potential candidate for accommodating Zn^{2+} ions.

Is ammonium vanadium oxide a high capacity cathode material for ARZIBs?

Increasing attention has been paid to the high capacity cathode materials with stable host structures and fast channels for diffusion of Zn^{2+} giving rise to high performance. Herein, we report ammonium vanadium oxide $[(\text{NH}_4)_2\text{V}_4\text{O}_9]$ sheets as a high capacity cathode material for ARZIBs for the first time.

Is potassium vanadate a cathode for rechargeable aqueous zinc-ion batteries?

B. Tang, G. Fang, J. Zhou, L. Wang, Y. Lei et al., Potassium vanadates with stable structure and fast ion diffusion channel as cathode for rechargeable aqueous zinc-ion batteries.

Are vanadium-based cathode materials suitable for aqueous zinc-ion (Zn^{2+}) batteries?

Vanadium-based materials are considered as promising cathode materials in aqueous zinc-ion (Zn^{2+}) batteries (AZIBs) because of their abundant valence states and adjustable ion diffusion channels.

Can $\text{NH}_4\text{V}_4\text{O}_{10}$ be enhanced by removing ammonium cation?

In this study, it is proposed that the electrochemical performance of $\text{NH}_4\text{V}_4\text{O}_{10}$ can be significantly enhanced by removing part of the ammonium cation and increasing the vanadium vacancy. The decrease of ammonium further increases the layer spacing, reduces the irreversible deamination and accelerates the diffusion of Zn^{2+} .

Is hydrated layered vanadium oxide a reversible cathode for rechargeable aqueous zinc batteries?

N. Zhang, M. Jia, Y. Dong, Y. Wang, J. Xu, Y. Liu, L. Jiao, F. Cheng, Hydrated layered vanadium oxide as a highly reversible cathode for rechargeable aqueous zinc batteries. Adv.

As one of the most critical components of the vanadium redox flow battery (VRFB), the ion exchange membrane directly influences the battery efficiency and cycle life. ... as the grafting reagents via ring-opening reactions. ...

As a large-scale energy storage battery, the all-vanadium redox flow battery (VRFB) holds great significance for green energy storage. The electrolyte, a crucial component utilized in VRFB, has been a research hotspot due to its low-cost preparation technology and performance optimization methods. This work provides a comprehensive review of VRFB ...

In this study, it is proposed that the electrochemical performance of $\text{NH}_4\text{V}_4\text{O}_{10}$ can be significantly enhanced by removing part of the ammonium cation and increasing the ...

Rechargeable batteries employing ammonium (NH_4^+) ions have attracted widespread interest owing to the abundant resources, eco-friendliness, and sustainability of NH_4^+ ions. Herein, an organic-inorganic ...

The rich chemistry of ammonium vanadate ($\text{NH}_4\text{V}_4\text{O}_{10}$, NVO) arising from the double layers of V_4O_{10} and vanadium in high oxidation state makes it a great potential ...

Sodium-ion battery (NIB) cathode performance based on ammonium vanadate is demonstrated here as having high capacity, long cycle life and good rate capability. ... Pre-removing partial ammonium ion induces ...

Introduction. The vanadium redox flow battery (VRFB) is the most intensively studied redox flow battery (RFB) technology, and commercial VRFBs are available for large-scale energy storage systems (ESS). 1-3 In an ...

Exceptionally high sodium-ion battery cathode capacity based on doped ammonium vanadium oxide and a full cell SIB prototype study+ Ananta Sarkar, Sudeep Sarkar and Sagar Mitra *

Vanadium-based materials are considered as promising cathode materials in aqueous zinc-ion (Zn^{2+}) batteries (AZIBs) because of their abundant valence states and ...

Transition metal ion-preintercalated V_2O_5 as high-performance aqueous zinc-ion battery cathode with broad temperature adaptability. Nano Energy, 61 (2019), ... Ammonium vanadium bronze as a potassium-ion battery cathode with high rate capability and cyclability. Small Methods, 3 (2019), p. 1800349, 10.1002/smt.201800349.

Introduction Aqueous ammonium-ion batteries (AAIBs) using non-metallic ammonium ions (NH_4^+) as charge carriers are receiving increasing attention, due to the fast diffusion kinetics of NH_4^+ and the interesting H-bonding ...
