How do I choose a lithium-ion-based energy storage system?

Choosing the right supplier when looking at lithium-ion-based energy storage systems is important. EVESCO's battery energy storage systems utilize an intelligent three-level battery management system and are UL 9450 certified for ultimate protection and optimal battery performance.

Why are lithium-ion batteries used in energy storage systems?

The popularity of lithium-ion batteries in energy storage systems is due to their high energy density, efficiency, and long cycle life. The primary chemistries in energy storage systems are LFP or LiFePO<sub>4</sub> (Lithium Iron Phosphate) and NMC (Lithium Nickel Manganese Cobalt Oxide).

What are battery storage systems?

Battery storage systems will play an increasingly pivotal role between green energy supplies and responding to electricity demands. Battery storage, or battery energy storage systems (BESS), are devices that enable energy from renewables, like solar and wind, to be stored and then released when the power is needed most.

How does a battery storage system work?

A battery storage system can be charged by electricity generated from renewable energy, like wind and solar power. Intelligent battery software uses algorithms to coordinate energy production and computerised control systems are used to decide when to store energy or to release it to the grid.

Are lithium-ion batteries a viable energy storage solution?

Lithium-ion batteries were developed by a British scientist in the 1970s and were first used commercially by Sony in 1991, for the company's handheld video recorder. While they're currently the most economically viable energy storage solution, there are a number of other technologies for battery storage currently being developed.

Why are lithium ion batteries so popular?

Lithium-ion batteries have a very high energy density. The high energy density means the batteries can store a large amount of energy in a small space footprint, making them ideal for applications where space is at a premium, such as in electric vehicles or energy storage systems.
