What does Li mean in a battery code?

The position of the letters in battery codes also carries meaning. When 'Li' is at the beginning of the code (like Li-ion), it signifies the battery is a rechargeable lithium-ion battery. In contrast, when 'Li' appears at the end (like CR2032Li), it typically indicates a non-rechargeable lithium battery.

What does the letter I mean on a lithium ion?

The letter I in a Li-ion battery indicates that there is a built-in lithium ion in the battery. The second letter indicates the cathode material: C for cobalt, N for nickel, M for manganese, and V for vanadium. For example:

What do the letters and numbers in a battery code mean?

The letters and numbers in the code indicate the number of cells, cell chemistry, shape, dimensions, the number of parallel paths in the assembled battery and any modifying letters deemed necessary. A multi-section battery (two or more voltages from the same package) will have a multi-section designation. IEC 60086 battery type designation system.

What do the numbers on a lithium battery mean?

The numbers on a lithium battery provide important information about the battery's dimensions or capacity. For Cylindrical Batteries (e.g., 18650): The numbers refer to the battery's physical size. In "18650": 18 = Diameter of the battery in millimeters (18mm). 65 = Length of the battery in millimeters (65mm). 0 = Cylindrical shape.

What is a cylindrical lithium ion battery?

A cylindrical lithium-ion battery is a lithium-ion battery with a cylindrical shape. According to IEC 61960, its model name is composed of three letters and five digits: the first three letters indicate 'lithium-ion' (I-L).
