

What is the name of a watch that uses solar power

What are solar-powered watches?

Solar-powered watches, as the name suggests, are watches that use solar energy to power themselves. The batteries of these watches charge via the usage of solar power or any light source, so they're always in working condition regardless of the situation. Designed for a variety of situations and lifestyles.

What is a solar watch?

But first off, what exactly is a solar watch? A solar watch is a timepiece that uses light energy to power its movement. The watch has a small solar panel on the face that absorbs sunlight and artificial light and converts it into electrical energy. As a result, this energy is used to power the watch movement and keep it running.

How do solar-powered watches work?

The watches of this kind are powered by light either entirely or partially. Beneath the dial of a solar-powered watch is a solar panel absorbing natural and artificial light to turn it into electrical energy that will power the watch. The converted energy is stored in a rechargeable cell, thus, the watch can be powered even when in the dark.

Where do solar-powered watches come from?

The third widely available source of solar-powered watches comes from Casio. The brand has named the technology Tough Solar, implying the ultra-durable construction of Casio watches. The power reserve of Casio solar watches depends on the use of various functions, but it stays mostly around six months.

What are the best solar-powered watches?

Citizen especially is associated with solar power, thanks to their innovative Eco-Drive technology that runs on any light. Eco-Drive movements power the bulk of Citizen's catalog, and as a result, you'll spot a number of their offerings among our list of the best solar-powered watches.
